

## IV Vitamin Drips

At Glasgow Private Clinic we offer a range of scientifically proven boosters and infusions to help maximise immune response, boost energy levels, improve mood and wellness, help anti-ageing and support diet and detox. Containing unique combinations of vitamins, minerals and amino acids, our drips and boosters are much more effective than orally ingested vitamins, delivering higher concentrations of nutrients directly to the body's cells.

They include formulations for sport, mood support, energy, immunity, skin brightening and hair restoration. We can also develop personalised formulations to meet your specific need.

## FAQs

### How does this treatment work?

Each booster or infusion contains a scientifically proven blend of vitamins, minerals and amino acids, developed to meet a specific health or wellness need. When administered intravenously these nutrients enter the bloodstream directly, and are delivered to the body's cells immediately and in much higher concentrations than with oral supplements.

### What happens during my treatment?

Boosters will be given while you are standing up and take only a few seconds. An intravenous cannula is inserted when we give a drip, which takes 20 – 45 minutes with the patient resting in a comfortable, reclined position.

### Will I feel any pain or side effects?

Usually no side effects occur, but occasionally you may experience a metallic taste in the mouth or feel flushed during treatment. Mild discomfort may be felt when a cannula is inserted or removed.

### Who is this treatment suitable for?

IV boosters and infusions are ideal for anyone wanting to revitalise, rejuvenate or recharge, as well as to support treatment for a particular condition such as hair loss.

# Available Vitamin Drips Types

## Immune Booster Drip £275

Is your immune system in need of a boost? Our IV Immune Booster Drip is a powerful concoction of vitamins and minerals to fortify your body's natural defenses. Ideal for individuals looking to prevent illness or recover faster from infections, this drip can help keep you at the top of your game.

## Focus Drip £275

In today's fast-paced world, maintaining focus and mental clarity is essential. Our IV Focus drip is formulated to enhance cognitive function and improve your concentration. If you have a demanding job, are a student, or simply need a mental boost, this drip is your key to increased productivity.
